

Call for Papers - Annual Thematic Workshop EcoSD 2016 25th of MARCH 2016 - Paris

How ecodesign of products and services can embrace the use stage ?

Opportunities and challenges to improve
global environmental performance
through genuine usage integration
during design

The aim of the workshop is to present the latest scientific and industrial development in the domain of usage integration for ecodesign and to shared successful and unfortunate experiences of integration. The main outcome of the workshop will be the identification of challenges and opportunities for joint initiatives on the topic for industry and research but also for communities and governments.

Usage integration is a core issue for sustainable design because it is often a major contributor to the environmental impacts of a product life cycle. Being a long lifespan or a high consumption of resources, it is crucial that designers and practitioners understand and act on the challenges raised during usage for environmental improvements of product design.

Deadlines

30th of November 2015 : Abstract submission of a 100 words with title, contributors names and affiliation - to be sent to g-scop.contact_ata2016@grenoble-inp.fr

17th of december 2015:
- Acceptance notification for abstract
- Final program for the day
- Opening of registrations
